

Software Asset Management and Licensing from BT Engage IT

Software Asset Management (SAM):

Good Software Asset Management looks at controlling utilisation, movement and manageability of all your expensive software assets to reduce the risk of compliancy audits whilst ensuring best return of investment on assets. This enables processes such as redeployment of licences through which operating and capital cost savings can be achieved. It also means the best possible tracking of software bought against software utilisation, to mitigate against increasingly audit-active software manufacturers.

Having complete software life cycle management can also reduce support costs and hardware expenditure together with improving network security to give complete compliancy peace of mind as a result.

Licensing:

BT Engage IT provides a complete licence review service, from answering simple day-to-day licensing questions to reviewing and understanding the existing contracts in place, understanding prevailing purchasing patterns and making recommendations on the numerous licensing contracts available.

When a business knows precisely what's been purchased, and it matches the audit data gathered, compliance with vendor licensing terms is easy to achieve and control.

Financial savings through better use of existing assets can reduce licensing costs and increase choice for best possible value licence agreements.

Price:

Cost is dependent on your requirements and on the solution purchased.
