

BT Versatility

Overview:

Lost calls and missed messages can damage both reputation and revenues. If employees can't communicate well with each other, they can't deliver for your customers.

Unlike the bigger players, SMEs can't always afford bespoke solutions and may not have the luxury of dedicated specialist staff. So you risk losing out on the savings, improved services and increased efficiencies that larger companies take for granted.

Reasons to use BT Versatility:

BT Versatility is BT's fastest selling communication system ever, using low-cost phone lines with BT Broadband Voice and shared access to network resources for voice and data, email and Internet applications. It's perfect for small businesses that want a communication system to work harder, especially now that it can:

- Use the Internet to save money on making calls
- Take the power of office communications to colleagues working at home or remotely

Features of BT Versatility:

- BT Versatility can make an immediate difference to all your communications, from basic telephony to more advanced applications
- Handle more calls and boost productivity – helps you work smarter – from feature-rich display handsets to latest-generation IP (Internet Protocol) phones for your people at home or in the field
- Never miss another call – BT Versatility Voicemail can help you make sure customers always get the attention and services they need, even when offices are closed or your people are busy
- Fast-track callers to the right place

Price:

BT will review the needs of your business and tailor a solution that best suits your requirements. Pricing available on request.*
